DATE MAILED: 10/23/2002

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/395,909

Applicant(s)

UVLIDEN ET AL.

Examiner

Angela A. Armstrong

Art Unit

2654

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 July 2002.
- 2a) ☒ This action is FINAL. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-25 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-25 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) 4) ☐ Interview Summary (PTO-413) Paper No(s). _____
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____. 6) ☐ Other: _____

DETAILED ACTION

Claim Rejections – 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3, and 6-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Deller et al (1987, Discrete-Time Processing of Speech Signals) in view of McCree (US Patent No. 6,122,608) and further in view of Ubale et al (US Patent No. 5,778,335).
3. Regarding claims 1-3, 8-9, 12-14, 17-19, and 22, at pages 480-482, Deller et al discloses the basic principles of the Code-excited linear prediction (CELP) coding method, which is based on an analysis by synthesis method. Deller et al teaches that the CELP synthesizer consists of long term predictor and short-term predictor and the output of the codebook is scaled by a gain and sent to the predictors. Deller et al does not specifically teach multiple codebooks or a selection procedure for selecting one of a multiple of codebooks for encoding/decoding a signal block. However, implementation of multiple codebooks and means for selecting one of the plurality of codebooks was well known in the art.

In a similar field of endeavor, McCree discloses a system and method for switched predictive quantization. Specifically, McCree teaches the implementation of multiple sets of fixed algebraic codebooks in the system, selecting a codebook based on a deterministic selection procedure that is independent of the signal type and performs encoding and decoding of a

Art Unit: 2654

particular frame (col. 4, lines 7-52). McCree teaches that the use of multiple codebook pairs results in a significant performance improvement over single codebooks (col. 4, lines 3-4).

Therefore, it would have been obvious to one of ordinary skill at the time of the invention to modify the CELP system of Deller et al, to implement multiple codebook pairs and selection of a codebook based on a deterministic selection procedure as suggested by McCree, for the purpose of improved system performance, as suggested by McCree.

Deller and McCree do not specifically teach that multiple excitation codebooks. However, implementation of multiple excitation codebooks was well known in the art.

In a similar field of endeavor, Ubale discloses a method and apparatus for efficient multiband CELP wideband speech and music coding and decoding. Specifically, at col. 6, lines 20-28 Ubale discloses implementation of multiple excitation codebooks in the CELP encoder, and specifically suggests that use of more than one excitation codebook results in better speech and music quality.

Therefore, it would have been obvious to one of ordinary skill at the time of the invention to modify the CELP encoding teachings of Dellar to implement multiple excitation codebooks as taught by Ubale, for the purpose of achieving better audio quality from the encoder.

4. Regarding claims 6-7, 15-16, 20-21, and 23-24, Deller et al discloses that the system performs an exhaustive search, which reads on the cyclically or randomly stepping through the sets of codebooks.

5. Regarding claims 10 and 11, Deller et al discloses that the CELP coder is used to process frames of speech (page 480).

Art Unit: 2654

6. Claims 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Deller in view of McCree and Ubale, and further in view of Heidari et al (US Patent No. 6,055,496).

7. Regarding claims 4 and 5, Deller, McCree, and Ubale teach everything as claimed in claim 3. Deller, McCree, and Ubale do not specifically teach of channel-protected parameters with error detection. However, implementation of channel-protected parameters was well known.

In a similar field of endeavor, Heidari teaches a CELP speech coder to improve overall system capacity (col. 2, lines 47-49, which implements channel coding that provides error protection (col. 2, lines 64-66).

Therefore, it would have been obvious to one of ordinary skill at the time of invention to modify the CELP coding system of Deller and implement channel coding which provides error protection, as taught by Heidari et al, for the purpose of improving overall system capacity, as suggested by Heidari et al.

8. Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over Minde et al (US Patent No. 5,991,717) in view of McCree and further in view of Ubale et al (US Patent No. 5,778,335).

9. Regarding claim 25, Minde et al discloses an analysis-by-synthesis linear predictive speech coder with restricted position multipulse excitation. Specifically, at Figure 6a and col. 5, line 63-col. 6, line 18, Minde et al, teaches a codebook with different allowed pulse positions and zero pulse positions. Minde et al does not specifically teach multiple codebooks or that each

Art Unit: 2654

codebook has different zero pulse positions. However, implementation of multiple codebooks was well known in the art.

In a similar field of endeavor, McCree discloses a system and method for switched predictive quantization. Specifically, McCree teaches the implementation of multiple sets of fixed algebraic codebooks in the system, selecting a codebook based on a deterministic selection procedure that is independent of the signal type and performs encoding and decoding of a particular frame (col. 4, lines 7-52). McCree teaches that the use of multiple codebook pairs results in a significant performance improvement over single codebooks (col. 4, lines 3-4).

Therefore, it would have been obvious to one of ordinary skill at the time of the invention to modify the analysis by synthesis linear predictive speech coder of Minde et al, to implement multiple codebook pairs as suggested by McCree, for the purpose of improved system performance, as suggested by McCree.

Minde and McCree do not specifically teach that multiple excitation codebooks. However, implementation of multiple excitation codebooks was well known in the art.

In a similar field of endeavor, Ubale discloses a method and apparatus for efficient multiband CELP wideband speech and music coding and decoding. Specifically, at col. 6, lines 20-28 Ubale discloses implementation of multiple excitation codebooks in the CELP encoder, and specifically suggests that use of more than one excitation codebook results in better speech and music quality.

Therefore, it would have been obvious to one of ordinary skill at the time of the invention to modify the CELP encoding teachings of Minde to implement multiple excitation codebooks as taught by Ubale, for the purpose of achieving better audio quality from the encoder.

Response to Arguments

10. Applicant's arguments with respect to claims 1-25 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

11. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Art Unit: 2654

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Angela A. Armstrong whose telephone number is 703-308-6258. The examiner can normally be reached on Monday-Thursday 7:30-5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marsha Banks-Harold can be reached on (703) 305-4379. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9314 for regular communications and 703-872-9314 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-306-0377.
